NikSoft Systems Corporation (NikSoft) is a small business providing IT and cybersecurity services to the Federal government since 1998. The NikSoft mission is to help the U.S. government secure our homeland, provide better citizen services and keep the U.S. military at the technological leading edge by providing world class services. Some examples include:

We helped the Defense Health Agency migrate 16 major applications that support the health of military personnel and their families to a cloud environment and are laying the groundwork for transition to microservices.

For the US Postal Service, NikSoft provides full cybersecurity support, including governance, cybersecurity engineering, threat intelligence, threat detection, incident management, and risk management.

At Customs and Border Protection we are transitioning existing legacy applications to a collection of cargo applications to consolidate infrastructure requirements, reduce operations and maintenance costs, and broaden the resource base to handle new system development and sustainment of transitioned applications.
